

Software Developer - Java

One of our clients, a multinational company that provides technology solutions to its customers, from the world's largest and most demanding businesses and public sector organizations, to small and medium businesses and consumers worldwide, is currently expanding its team in Bucharest with a **Java Software Developer**.

This is an excellent opportunity to gain experience in a dynamic development team. You will be working in an Agile environment, developing a web 2.0 application, an e-learning platform intended to provide a user experience similar to that offered by modern social network websites, such as Facebook, with an interface solution that can be customized depending on each client's needs.

Summary:

- Analyze business requirements/processes and system integration considerations to determine appropriate technology solutions for internal and external customers
- Design, evaluate, code, configure, test and document applications based on system and user requirements
- Use current programming language and technologies, write code, complete programming, and perform testing and debugging of applications
- Prepare flow charts and systems diagrams to assist in problem analysis
- Prepare design documentation
- Prepare test data for unit and parallel testing
- Analyze business needs and define software solutions including custom developed and off the shelf software
- Evaluate and recommend software and hardware solutions to meet user needs.
- Resolve customer issues with software solutions and responds to suggestions for improvements and enhancements
- Interacts with team members, business users, I/T, vendors and customers to define current and future application requirements

Must have skills:

- A Computer Science Degree or a Degree course with a strong Mathematical and programming content
- 4-6 years of development experience
- Fluency in English and excellent communication skills
- Commercial development experience using Enterprise Java technologies (Java 5/6)
- Understanding and experience with XML technologies
- Portlet development experience (JSR 168, 286, etc.) and AJAX

Desirable:

- Development experience using the Liferay portal platform
- Spring 3.0/Spring 3.1 and Spring Security
- Agile Development methodologies and experience in an agile environment
- Experience of JIRA, defect resolution tools, etc.
- Sonar quality management platform
- Experience of Apache Maven build tool
- Unit test, automation & integration testing experience
- YUI or Alloy UI
- JQuery, JavaScript, JSP, CSS development experience

Benefits

- Increase your knowledge by working in an experienced and professional environment.
- A dynamic team with a free communication style and also the possibility to make outstanding performances fairly rewarded.
- Medical insurance, dental insurance and meal tickets.
- Possibility of participating to in house trainings but also to other certifications if necessary.
